15

1 <u>Claims</u>

2

- 3 1. A process for preparing a particulate solid
- 4 material comprising the steps of:
- 5 (a) obtaining a paper-fibre waste solid material
- 6 having a ratio of china clay, or equivalent, to
- 7 chalk, or equivalent, greater than a pre-determined
- 8 minimum;
- 9 (b) treating the material to reduce the moisture
- 10 content and form a granular material; and
- 11 (c) calcining the granular material at a temperature
- of approximately 1300°C or higher to provide a
- 13 particulate, 100% solids, material.

14

- 15 2. A process as claimed in claim 1 wherein the
- 16 paper-fibre waste solid material is non-hazardous
- waste material arising from the recycling of waste
- 18 paper and tissue.

19

- 3. A process as claimed in claim 2 wherein the
- 21 paper-fibre waste solid material is in the form of
- 22 sludge.

23

- 4. A process as claimed in any one of the preceding
- 25 claims wherein the paper-fibre waste solid material
- 26 has a moisture content of over 45%.

27

- 5. A process as claimed in claim 4 wherein the
- 29 paper-fibre waste solid material has a moisture
- 30 content of over 55%, optionally 60%.

16

6. A process as claimed in any one of the preceding 1 claims wherein minor components in the paper-fibre 2 waste solid material including non-fibrous 3 contraries materials are removed prior to step (b). 4 5 7. A process as claimed in any one of the preceding 6 claims wherein the paper-fibre waste solid material 7 is waste paper from a paper making process. 8 9 8. A process as claimed in any one of the preceding 10 claims wherein the china clay or equivalent includes 11 any form of hydrated aluminium silicate, including 12 kandites, kaolins and the like. 13

14

9. A process as claimed in any one of the preceding 15 claims wherein the chalk or equivalent includes any 16 form of calcium carbonate, which includes the forms 17 18 of limestone.

19

10. A process as claimed in any one of the preceding 20 claims wherein the process further includes the step 21 22 of: dewatering the paper-fibre waste solid material

23

prior to step (b). 24

25

11. A process as claimed in claim 10 wherein the 26 dewatering process provides a sludge material having 27 a solids content generally in the range 22-55%. 28

29

12. A process as claimed in claim 10 or claim 11 30 wherein analysis of the china clay: chalk ratio is 31

17

carried out prior to the dewatering of the waste 1 2 material.

3

13. A process as claimed in any one of the preceding 4

claims wherein the determination of the ratio of the 5

china clay: chalk is carried out using the 'acid 6

extraction' method. 7

8

14. A process as claimed in claim 13 wherein the 9

pre-determined minimum ratio using the "acid 10

extraction" method is approximately 0.2. 11

12

15. A process as claimed in any on of claims 1 to 12 13

wherein the determination of the ratio of the china 14

clay: chalk is carried out using the "ash/acid 15

extraction" method. 16

17

16. A process as claimed in claim 15 wherein the 18

pre-determined minimum ratio using the "ash/acid-19

extraction" method is approximately 0.13. 20

21

17. A process as claimed in any one of the preceding 22

claims wherein a conditioning material is added to 23

the paper-fibre waste solid material in step (a). 24

25

18. A process as claimed in claim 17 wherein the 26

conditioning agent raises the china clay: chalk ratio 27

above the pre-determined minimum. 28

29

19. A process as claimed in claim 17 or claim 18 30

wherein the conditioning material is partly, 31

18

1 substantially or wholly china clay, or at a china

2 clay suspension, or another silicate material.

3

4 20. A process as claimed in any one of claims 17 to

5 19 wherein a dispersing agent is added with the

6 conditioning agent.

7

8 21. A process as claimed in any one of claims 17 to

9 20 wherein the material has a solids content of less

than 45%, optionally 22% or lower.

11

12 22. A process as claimed in any one of the preceding

13 claims wherein the ratio of silica and aluminium to

14 natural fillers in the paper-fibre waste solid

15 material is also determined.

16

17 23. A process as claimed in any one of the preceding

18 claims wherein the treatment step (b) includes

19 compression and/or extrusion of the material.

20

21 24. A process as claimed in Claim 23 wherein step

22 (b) is carried out by a granulating press.

23

24 25. A process as claimed in any one of the preceding

25 claims wherein the treatment step (b) is provided by

26 direct heat contact.

27

28 26. A process as claimed in claim 25 wherein a heat

29 transfer material is used.

19

1 27. A process as claimed in any one of the preceding

2 claims wherein the treatment step (b) is carried out

3 with agitation.

4

5 28. A process as claimed in claim 27 wherein the

6 agitation is provided by a rotary apparatus.

7

8 29. A process as claimed in claim 28 wherein the

9 rotary apparatus is inclined.

10

30. A process as claimed in claim 28 or claim 29

wherein the rotary apparatus allows for a wholly or

13 substantially continuous feed of material.

14

15 31. A process as claimed in any one of the preceding

16 claims wherein the treatment step (b) is carried out

17 at a raised temperature, optionally between 60-80°C.

18

19 32. A process as claimed in any one of the preceding

20 claims wherein step (b) is carried out under an

21 inert atmosphere.

22

33. A process as claimed in any one of the preceding

24 claims wherein the granular material provided by

25 step (b) comprises granules in the range 3mm-30mm in

26 size.

27

34. A process as claimed in any one of the preceding

29 claims wherein the granular material formed by step

30 (b) is reduced in size, optionally by grinding or

31 milling.

20

35. A process as claimed in any one of the preceding 1 claims wherein the granular material formed by the 2 treatment step (b) has a solids content in the range 3 of approximately 45-90% solids. 4 5 6 36. A process as claimed in any one of the preceding 7 claims wherein the calcining of the granular 8 material reduces the moisture in the material wholly 9 or substantially to zero. 10 37. A process as claimed in any one of the preceding 11 12 claims wherein particulate material being formed by step (c) is partly or substantially porous. 13 14 38. A process as claimed in any one of the preceding 15 claims wherein the granular material is calcined 16 17 with agitation. 18 19 39. A process as claimed in claim 38 wherein the 20 agitation is provided by a rotary apparatus.

21

22 40. A process as claimed in claim 39 wherein the 23 rotary apparatus is a high temperature rotary

24 furnace tube.

25

41. A process as claimed in any one of the preceding 26 27 claims wherein the calcining temperature is greater 28 than 1300°C, optionally approximately 1320°C, or 29 optionally higher.

21

- 1 42. A particulate solid material whenever prepared
- 2 by a process as defined in any one of claims 1 to

3 41.

4

- 5 43. A particulate solid material formed from a
- 6 paper-fibre waste solid material having a bulk
- 7 density of less than $1,000 \,\mathrm{kg/m^3}$, preferably in the
- 8 range 560kg/m^3 to 800kg/m^3 , and in the form of an
- 9 aggregate having a mean particle size in the range 3
- 10 to 15mm.

11

- 12 44. A particulate solid material as claimed in claim
- 13 42 or claim 42 being a light-weight aggregate for
- 14 making cementitious, concrete or other building
- 15 blocks.

- 17 45. A particulate solid material as claimed in claim
- 18 42 or claim 43 having a particle size of less than
- 19 $100\mu m$, and being a cementitious material.
